

Designed by Stangeland and Associates, Inc. Soil products, irrigation, and landscape installation by Rexius / Grant's Landscape Services. Water provided by Eugene Water & Electric Board.

GARDEN MAINTENANCE

- ☐ Rake and recycle leaves. Destroy diseased leaves of roses, apples, cherry, and dogwood if composting at home. Commercial composting provides higher temperatures to eliminate those pathogens.
- ☐ Dig and divide crowded perennials. Enrich soil with organic soil amendments such as Rexius Garden Compost or Steer Plus™. Cut back foliage of those that have already died back.
- ☐ Spread a layer of mulch around ornamental shrubs for winter protection, moisture retention, and weed prevention.
- ☐ At the first sign of rain, turn off sprinkler timer. If the sun returns, turn the timer on and set to EWEB waterline recommendations.
- ☐ Contact Rexius/Grant's Irrigation professionals for information on Rain Sensors for your irrigation controller.

LAWN CARE

- ☐ Mow as needed. Mower blades can be lowered back down.
- ☐ Keep fallen leaves off lawn. (They can smother your grass).
- ☐ Last chance to plant new or over-seed existing lawns if not done already...
- ☐ Fertilize lawns for the last time this year.

PLANTING GUIDE

- ☐ Plant and transplant trees, shrubs, and ground covers so they can become settled in before winter. Use Rexius Tree-n-Shrub planting soil.
- ☐ If soil temperatures have cooled down start planting your spring bulbs. Plant in masses of one variety or color for the most effect.
- ☐ Remember to add natural calcium and phosphorus to your bulb beds.
- ☐ Plant your garlic cloves now!

Stone makes a beautiful backdrop and adds great value to your property.
